

cleanRAM

Release Notes

The release notes provide information on the following:

- [Release Version 2.5](#)
- [Release Version 2.4](#)
- [Release Version 2.3](#)
- [Release Version 2.2](#)
- [Release Version 2.1](#)
- [Release Version 2.0](#)
- [Release Version 1.9.9](#)
- [Release Version 1.9.6](#)
- [Release Version 1.8.0](#)
- [Release Version 1.7.0](#)

Release Version 2.5

(includes all previously released updates)

New Features & Resolved Issues:

- Modify the "Customized Processes List" settings screen (now easier).
- More powerful for who doesn't use "GUI" option.
- Add more details to debug mode (log file).
- Languages files added to cab file (last update: 22/10/2010) and will be update as needed.

Release Version 2.4

New Features & Resolved Issues:

- New Settings Screen with General, Advanced, GUI and Language tabs.
- **"Don't Interrupt Me"** - cleanRAM will start only when device is on idle/sleeping/nonactive status.
- **"Standby Power After Cleanup"** - This function will turn off the device screen (sleep mode) every time after cleanRAM finished.
- **"Standby Power After Cleanup (Schedule)"** - This function is good for those are who using the "Wakeup Device" setting on schedule mode and want to turn off the device screen. This function works only on schedule mode.
- **"Ignore Blocking Navigation Apps"** - Ignore from closing cleanRAM due navigation programs and continue cleaning the system including the navigation programs.
- **"Debug Mode"** - This function can help you to track cleanRAM behaviors, issues and progress in real-time. The information is saved in "cleanRAM.log" file, on root folder (look like this: "\cleanRAM.log").
- Dialogs sequence fixed.
- Schedule doesn't work after one time, issue fixed.
- **Add language strings:** "General", "Don't Interrupt Me", " Ignore Blocking Navigation Apps", "Standby Power After Cleanup", "Standby Power After Cleanup (Schedule)" and "Debug Mode".

Release Version 2.3

New Features & Resolved Issues:

- Add language strings: "Show Black Curtain", "WisBar Advance Desktop" and "Infinity".
- cleanRAM is now supporting "WisBar Advance Desktop" and "Ageye Infinity" GUI cleaning.
- Add "Show Black Curtain" option to settings menu - this option allows you to put a black curtain while cleaning.
- Debug Mode (log file) - To enable the debug mode, you will need to change the registry key: "debugModeEnable" to value "1" (0 = Disable) and after the cleanRAM done you will be able to view the "cleanRAM.log" file (on root "\" folder).
- Fixed the freezing issue while GUI cleaning.

Release Version 2.2

New Features:

- Add language string: "ThrottleLauncher"
- cleanRAM is now supports ThrottleLauncher GUI cleaning
- Better support for Windows Mobile 6.5.X

Release Version 2.1

Resolved Issues:

- New language strings added:
 - Information = Information
 - Notification = Notification
 - NextCleanupWillBeginAt = Next cleanup will begin at:
- Scheduler bugs:
 - Continuity issue fixed
 - Schedule by days fixed

Release Version 2.0

New Feature and Resolved Issues:

- User Manual Updated (for version 2.0)
- Add language strings:
 - Advanced = Advanced
 - AdvancedGUI = Advanced / GUI
 - AdvancedSettings = Advanced Settings
 - GUI = GUI
 - SelectGUI = Select GUI/Shell
 - GUISettings = GUI Settings
 - S2U2LockAfterCleanup = S2U2 Lock After Cleanup
 - S2U2LockAfterCleanupSecheduleOnly = S2U2 Lock After Cleanup (schedule)
 - HD2 = HTC HD2
 - HD2Quiet = HTC HD2 (Quiet)
 - DefaultProfile8 = Best performance with HTC HD2
 - DefaultProfile9 = Best performance with HTC HD2 - Quiet Mode
 - TodayItems = Today Items (Auto Mode)
- Add new screen: "Advanced / GUI" – Define your device's GUI settings for better cleaning support + Extra advanced settings
- Add "Today Items (Auto Mode)" option to GUIs list - Cleans all today items (Auto GUI Search and Clean) – Recommended!
- A few settings (from "settings" screen) have been moved to "Advanced" screen
- Schedule date format fixed

Release Version 1.9.9

New Feature and Resolved Issues:

- Stable Version
- Remove language strings:
 - HD2 = HTC Sense
 - HD2Quiet = HTC Sense (Quiet)
- Add language strings:
 - Manila1 = TouchFLO 3D
 - Manila1Quiet = TouchFLO 3D (Quiet)
 - Manila2 = HTC Sense
 - Manila2Quiet = HTC Sense (Quiet)
 - Manila3 = TouchFLO 2D
 - Manila3Quiet = TouchFLO 2D (Quiet)
 - WM65GUI = WM6.5 GUI
 - WM65GUIQuiet = WM6.5 GUI (Quiet)
 - SPBShell = SPB Shell
 - SPBShellQuiet = SPB Shell (Quiet)
 - DefaultProfile11 = Best performance with TouchFLO 3D GUI
 - DefaultProfile12 = Best performance with TouchFLO 3D GUI - Quiet Mode
 - DefaultProfile13 = Best performance with Windows Default GUI
 - DefaultProfile14 = Best performance with Windows Default GUI - Quiet Mode
 - DefaultProfile15 = Best performance with SPB Mobile Shell GUI
 - DefaultProfile16 = Best performance with SPB Mobile sShell GUI - Quiet Mode
 - Default settings is now comes without "Close All Applications" setting
 - DefaultProfile17 = Best performance with TouchFLO 2D GUI
 - DefaultProfile18 = Best performance with TouchFLO 2D GUI - Quiet Mode
- cleanRAM is now support GUI cleaning, tested on: TouchFLO3D, HTC Sense ,SPB Shell, Windows Mobile 6.5. You can select and load the best settings for your device's GUI (Graphical User Interface) which allows cleanRAM to get more power and make a better cleaning.
- cleanRAM is now supports GUI cleaning, you can turn on the GUI mode by typing your WM GUI name to "winGUI" registry key value. For examples: winGUI = "HTC Sense" or winGUI = "TouchFLO 3D" etc. (note that, default value key for winGUI is "" = inactive clearing GUI)
- Clear recent start menu items setting fixed
- Remove registry key: "htcSenseEnabled" (no need it anymore)
- New registry key: "winGUI" added
- Performance & Code Improved
- "Close All Applications" Fixed

Release Version 1.9.6

New Feature and Resolved Issues:

- Fully support HTC Sense GUI, all issues fixed + HTC Sense GUI compatibility to get the best speed performance with the new HTC devices (like HD2). To enable HTC Sense mode you will need to change the registry key: "htcSenseEnabled" to "1". Or you can load the "HTC Sense" settings (through "Backup / Restore" feature) and by that you will turn on the HTC Sense mode.
- New backup settings for Cooked ROM, you can load the recommended setting through cleanRAM Config -> "Backup / Restore" -> Select Settings: "Cooked ROM" - This settings can help you to solve most of familiar Cooked ROM issues by excluding all the problematic processes.
- New languages files added to cab file (last update: 24/02/10), please see [cleanRAM xda-developers.com forum post #3](http://cleanRAM.xda-developers.com/forum/post/#3) for more information.
- New backup settings for HTC Sense best performance. you can load the recommended setting through cleanRAM Config -> "Backup / Restore" -> Select Settings: " HTC Sense" or "HTC Sense - Quiet mode".
- New cleanRAM icons (128x128) changed (thanks to [dinik](#)).
- Fixed bugs reported by the users community.
- Windows Mobile 6.5 official ROM (HTC HD2 device) now supported (WM6.5 "DateTime" format fixed).
- Another way to add process(es) to exceptions list. Now you can add exceptions through file (exceptions.ini), just create a new file with the name "exceptions.ini" then edit this file and add your process(es) name(s) include the symbol != before every process name. For more information read the manual.
- New registry key (exceptionFile) added, this key will you define the name of the exceptions file (Default: "exceptionFile=exceptions.ini").
- New option in the "Exceptions List" feature added - now you can select between "Running Processes" to "Startup Shortcuts", it's mean that you can add processes also from "Startup" folder (when using "Launch Startup Programs" setting). Notice that only if the "Launch Startup Programs" setting (from settings menu) is checked you will able to use the "Startup Shortcuts" option (from exceptions list).
- Schedule date/time (culture) format auto find fixed (new registry key "schedulingDateTimeFormat" added).
- cleanRAM loading faster.
- Fix the issue with landscape resolution.
- Fix the issue with Rhodium Phone Canvas.
- Fixed bugs reported by the users community.

Release Version 1.8.0

New Features:

- Addition to "Backup / Restore" feature you can now select and load default settings from reservoir list.
- New registry key (s2u2Folder) added, this key will you define the right S2U2 folder.
- New registry keys added, the first is "s2u2LockAfterCleanup", this key will help you to lock your screen (using S2U2 application) after clean-up done. the second is "s2u2LockAfterCleanupSchedule" the same thing but work only on schedule mode.
- More compatibility for Windows Mobile v6.5.

Resolved Issues:

- Fix all S2U2 issues, now you can enjoy working with S2U2 and cleanRAM together.
- Fix small issue with wake up device screen light.

Release Version 1.7.0

New Features:

- Windows Mobile 6.5 compatibility.
- Display Today Screen When Finished - Force display today screen when clean-up finished.
- New registry value (LangFolder) added that help you to define the default language folder. Examples: if the file "htcAddicts_cleanRAM_Config.exe" and the language files are on the same folder you should need to clean this value (LangFolder="") and if the language files is on the folder with another name like: "Lang2", you need just edit the value to the right name. Notice, you can't use "\" symbol.
- Added debug status for schedule feature.
- cleanRAM is now more applications supported.
- Some small changes in the UI.

Resolved Issues:

- Voice command and mail service stopped when using close all applications feature fixed.
- OK button doesn't save the lists issue fixed.
- Backup doesn't save language value fixed.
- Fixed bugs reported by the users community.
